PROFILE

A final-year Informatics Engineering student at Dian Nuswantoro University, specializing in data science and data analysis. I am skilled in research, analytical thinking, and project management. I am proficient in Python, SQL, spreadsheet, and Power BI for data analysis and visualization. I have a strong interest in pursuing a career in **data analysis** and **data science**, focusing on transforming data into valuable insights.

EDUCATION

Undergraduate Informatics Engineering

Universitas Dian Nuswantoro Semarang • 2022 - 2026 • GPA 3.79 / 4.0

- Joined the Informatics Engineering Student Association.
- Participated in Program Penguatan Kapasitas Organisasi Kemahasiswaan (PPKO Kemendikbud).
- Became a Core Team Member for the Google Developer Group on Campus at Dian Nuswantoro University.

ORGANIZATION & LEADERSHIP

Head of Creative Media (Core Team)

Google Developer Group on Campus UDINUS

October 2024 - September 2025

- Leading a team of 3 members.
- Creating designs for social media publications.
- Creating design concepts for social media publications.
- Reviewed and approved all visual assets for publication to ensure alignment with brand guidelines and campaign objectives.

Head of Information and Communication Division

Himpunan Mahasiswa Teknik Informatika UDINUS

September 2024 - September 2025

- Led two divisions under the Department of Media, Information, and Public Relations, ensuring smooth coordination and goal achievement.
- Implemented and managed 3 main programs within the field, driving successful execution and measurable outcomes.
- Developed creative design concepts for social media content to enhance audience engagement and brand presence.
- Reviewed and ensured the quality and accuracy of publication content before upload, maintaining consistency with brand guidelines.

Head of Department Information Media

Himpunan Mahasiswa Teknik Informatika UDINUS

September 2023 - September 2024

- Successfully led and managed a team of 7 members, ensuring effective task delegation and project completion.
- Designed engaging and creative social media publication materials to strengthen brand visibility and audience engagement.
- Reviewed and ensured the quality and accuracy of publication content before upload, maintaining consistency with brand guidelines.

PROJECTS

Stunted Prediction

- Building a model to detect stunted growth, using SVM, Random Forest, and XGBoost algorithms to provide actionable insights for early intervention and resource allocation.
- Engineered a predictive analytics solution for stunted growth detection, leveraging machine learning models to provide actionable insights for early intervention and resource allocation.
- Create a website for the stunting detection interface from the created model.

Work Order Performance Analysis

- Processed and transformed raw work order data (858 records) into structured visual analytics.
- Designed intuitive visualizations to support management in evaluating operational efficiency, cost-effectiveness, and service quality.
- The dashboard streamlined performance monitoring, improved visibility into operational bottlenecks, and supported data-driven decision-making in resource allocation, warranty control, and cost management.

Country Data Analysis

- Collected and transformed international development datasets into structured analytics for visualization.
- Implemented map integration and dynamic visuals for geographic and comparative analysis.
- This dashboard improved the ability to identify global development gaps, track economic and health disparities, and support data-driven decision-making for policy research and international development studies.

NLP | Detecting Positive and Negative Sentiment in TikTok Comments on the "UU TIPIKOR"

- Collected and preprocessed TikTok comment data (cleaning, tokenization, stopword removal, case folding).
- Implemented TF-IDF (Term Frequency–Inverse Document Frequency) for text feature extraction to represent comments numerically.
- Building and training a Support Vector Machine (SVM) classifier to distinguish between positive and negative sentiment, achieving an accuracy of 88%.
- Evaluated the model using accuracy, precision, recall, and F1-score to measure performance.
